	TST #1	TST #2
<b>Administration</b>		
Name of person giving test		
Date and time administered		
Location (circle)	L forearm      R forearm	L forearm      R forearm
Tuberculin manufacturer		
Tuberculin exp. date and lot #		
Administrator signature		
Results (48-72 hours)		
Date and time read:		
Number of mm of induration: ( <u>across</u> forearm)	_____ mm	_____ mm
Interpretation of reading (circle)	Positive**      Negative	Positive**      Negative
Reader's signature		

**\*\*Interpreting the TST**

**≥ 5 mm** is positive:

- HIV infected
- Recent contacts
  - People with fibrotic changes on CXR
  - Patients with organ transplant and others on immunosuppressant drugs (including prolonged course of oral or intravenous corticosteroids or TNF alpha inhibitors)

**≥ 10 mm** is positive :

- Born in or former resident of country with high TB incidence
- Injection drug user
- Mycobacterial lab workers
- People who live/work in high risk congregate settings (health care workers, long term care, correctional facilities)
- Children younger than 4 years
- Infants, children and adolescents exposed to adults in high risk categories

**≥ 15 mm is positive** if there are no known TB risk factors
