Introduction

On March 23, 2020, Governor Kate Brown issued Executive Order (EO) 20-12 to support the health and safety of all Oregonians. EO 20-12 establishes workplace restrictions for employees who cannot work at home. All businesses, including agricultural businesses, should implement and enforce policies related to physical distancing and mask/face coverings that are consistent with guidance from the Oregon Health Authority (OHA). These prevention measures provided by OHA and Oregon Occupational Health and Safety Division (OSHA) can help agricultural work in Oregon proceed safely.

Studies show the virus that causes COVID-19 spreads easily from person to person when people gather and work in close proximity to one another, such as in housing facilities for farm workers. Farm owners and supervisors, including those who provide housing or transportation for farm workers, need to ensure all physical distancing guidelines and workplace safety measures are followed. Open communication and feedback from employees are critical to providing a safe work environment for permanent and seasonal employees.

The following recommendations for agricultural employment, housing and transportation are intended to reduce transmission of COVID-19. The guidance is consistent with Oregon OSHA temporary rule 437-001-0749. More information about this rule is located at osha.oregon.gov/covid19.

People older than 65 and people with medical conditions such as asthma, diabetes, chronic lung disease, chronic heart disease, high blood pressure or a compromised immune system (e.g., cancer or treatments that suppress the immune system) are at increased risk for severe illness, such as respiratory failure and death from COVID-19.

People with no pre-existing conditions can also get COVID-19. People can have COVID-19 without having symptoms, and they can still spread the virus to others.

For employers of agricultural workers

Stay informed

Agricultural employers can help prevent the spread of COVID-19 among agricultural workers by staying informed about current COVID-19 information at both the state and local level. The OHA website for COVID-19 is http://healthoregon.org/coronavirus.

Physical distancing policy

Develop a physical distancing policy and train supervisors and employees on this policy. Key components of your policy should include:

- Maintaining 6 feet of distance between people (physical distancing) to avoid spreading illness during work activities and breaks.
- Appointing a Physical Distancing Officer to ensure physical distancing is maintained.
- Limiting personal contact and groups when using common facilities at any time.
- When possible, implementing alternative spacing of people while harvesting and processing to increase the distance between employees.
- Extending policy to provide housing with additional guidance below.
Training for employees

Materials should be provided in the languages understood by the employees whenever possible. Provide training for all employees, including supervisors, foremen and camp operators overseeing labor housing, on:

- Following these guidelines and your established physical distancing policy.
- COVID-19 prevention. See Appendix A, “Resources for Agricultural Employers” for links to videos, posters and other materials to help educate employees about this illness.
- Appropriate hand-washing, hygiene practices and sanitation processes while at work. See Appendix A for resources.

Resources and protection for workers

All employees have the right to a safe and healthy work environment. Additionally, employers can encourage employees to access resources that will help them stay healthy.

- If employees cannot work due to quarantine or illness with COVID-19, provide them with information about the Oregon Worker Relief Fund and Quarantine Fund for wage replacement at no cost to the employer: workerrelief.org or 1-888-274-7292.
- Consider helping employees access assistance programs, community resources and local health care resources that provide free or low-cost care.
- Allow community partners to provide on-site and/or phone outreach to workers per ORS 659A.253.
- Provide a list of health care facilities where employees with respiratory illness can seek appropriate care as needed. Identify health care facilities in your area that provide free or low-cost care; you may ask your local public health authority for assistance identifying these facilities if needed.
- Consider allowing workers to report safety and health concerns without being identified. If they have the choice to do this anonymously, they will be more likely to reach out and report incidents that they have experienced or observed. One such reporting process is available through Oregon OSHA. The online form allows workers to report concerns or complaints about employers’ compliance with COVID-19 workplace restrictions: https://www4.cbs.state.or.us/exs/osha/hazrep/.
- Under the Oregon Safe Employment Act, employers may not take any adverse action such as firing, demoting or otherwise retaliating against a worker they suspect of exercising safety and health rights, such as raising safety and health concerns to their employer, participating in union activities concerning safety and health matters, filing a safety and health complaint, or participating in an Oregon OSHA investigation.
- Like all workers, migrant and seasonal farmworkers and other agricultural workers have the right to a safe work environment. The employer must follow all applicable workplace health and safety rules administered by Oregon OSHA and the Oregon Bureau of Labor and Industry (BOLI). See Oregon Administrative Rules, Chapter 437 and 839.
Infection prevention recommendations

Minimize the risk of exposure to COVID-19 in your workplace by:

- Continuing to follow Oregon OSHA’s sanitation rules for agriculture (OAR 437, Division 4 Agriculture, Subdivision J, Work Environment), which include recently adopted temporary rules specific to COVID-19.

- Ensuring bathrooms and hand-washing facilities are consistently stocked with potable water, soap and disposable drying materials for hand-washing. Provide access to tissues, trash bins and plastic bags for the proper disposal of used tissues and other personal care products.

- Cleaning and sanitizing all frequently touched surfaces in the workplace at least twice per day. Give special attention to high-touch surfaces, including, but not limited to, door handles, faucets, toilet handles, light switches, countertops, chairs, tables, time clock areas, vehicles, equipment, machinery and tools.

- Adhering to physical distancing recommendations in the workplace (at least 6 feet between people where possible). This includes transportation between and around work areas as well as company-provided transportation. In transportation settings where it may not be possible to maintain 6 feet of distance, a minimum of 3 feet is required.

- Avoiding sharing tools, gloves, equipment and other employer-provided gear.

- Supporting any disease monitoring efforts undertaken by the local public health authority or community health center.

- Not asking individuals with possible COVID-19 symptoms to report to work. These symptoms are as follows:
  - Fever
  - Cough
  - Shortness of breath or difficulty breathing
  - Chills
  - Sore throat
  - New loss of sense of taste or smell
  - Fatigue
  - Muscle or body aches
  - Headache
  - Congestion or runny nose
  - Nausea or vomiting
  - Diarrhea

A list of practical suggestions for agricultural workplaces to reduce the spread of illness is included in Appendix B.
**Agricultural workplaces**

Employers have a responsibility to provide a safe workplace to reduce the spread of COVID-19. Businesses must have clear policies that are provided to and followed by everyone at work. This section provides additional guidance to agricultural employers.

Please know Oregon's Food Security and Farmworker Safety Program provides assistance to Oregon's agricultural producers to help secure Oregon’s food supply chain and protect essential agricultural workers from COVID-19 exposure and illness. Agricultural producers are responsible for complying with COVID-19 emergency requirements from Oregon OSHA for housing, transportation and field sanitation. Producers faced with additional costs because of these requirements can apply for assistance in any or all categories by completing a single application online at [https://www.oregon.gov/oweb/Forms/FSFS-Application.pdf](https://www.oregon.gov/oweb/Forms/FSFS-Application.pdf).

This section provides additional guidance to agricultural employers.

**Physical distancing**

- Limit the number of employees working in indoor or outdoor areas to facilitate physical distancing.
- Physical distancing of at least 6 feet should be maintained at all times, including in transportation, lunch times and breaks. In transportation settings where a distance of 6 feet cannot be maintained, a minimum of 3 feet must be maintained.
- Rotate breaks and lunches to allow for more physical distancing and use of the bathroom and sink facilities.

**Sanitation and hygiene**

- Ensure workers’ ability to access sanitation facilities often and not just during their breaks.
- Provide signs and verbally discuss information about:
  - Washing hands after coughing, sneezing and using restroom
  - Washing hands before eating
  - Avoiding touching face, eyes, nose and mouth
- Signs are available on the OHA and CDC websites. Links are available in Appendix A.
- Provide this information in English, Spanish and any other prevalent language spoken by the workers.

**Preventive actions**

- Emphasize everyday preventive actions through strong, consistent messages to your employees, your supervisors and visitors to your business.
  - If the presence of visitors cannot be avoided, it is advised to maintain a record of all visitors.
- Require workers to wear face coverings consistently and provide opportunities to change and clean face coverings regularly.
  - Clearly communicate to workers and supervisors that face coverings should be used in conjunction with, not instead of, physical distancing measures.
• Apply to the Field Sanitation section of the Food Security and Farmworker Safety program for financial assistance with procuring face masks: https://www.oregon.gov/oweb/fsfs/Pages/index.aspx.

• Consider screening employees for illness at the start of each shift. Ask if they are feeling well and identify those who report any symptoms of illness.

• If a worker reports symptoms, follow the recommendations below in the section titled, “Support for Sick Employees.”

Worksite disinfectants
Employers can take steps to facilitate good health practices on the worksite.

• Continue to follow Oregon OSHA’s sanitation rules for agriculture (OAR 437, Division 4 Agriculture, Subdivision J, Work Environment), which include temporary rules specific to COVID-19.

• Make sure that workers have access to the following supplies at the worksite, in common areas, in bathrooms and where they eat:
  ▪ In addition to providing hand-washing facilities, provide hand sanitizer containing at least 60% alcohol, if available. Hand sanitizer may be used in addition to appropriate hand-washing with soap and water. Soap and water are needed any time hands are visibly soiled.
  ▪ Provide a disinfectant that is active against emerging viral pathogens and human coronaviruses to those who sanitize counters, bathrooms and other workplace areas.
  ▪ Provide supplies to prevent the spread of COVID-19 like water, soap, disposable drying materials, alcohol-based hand sanitizer, tissues and lined trash cans, and replenish these supplies as needed throughout the day. Contact your county emergency manager for assistance if there are issues obtaining these supplies through your usual vendors.

Worker and supervisor education
COVID-19 is a new illness. Employers should instruct workers, supervisors and foremen about the illness and how to protect themselves. Instruction should occur in any language used to communicate with workers. Resources to help you do this are included in Appendix A.

• Educate workers and supervisors about hand hygiene, respiratory etiquette, physical distancing and the use of face coverings. Provide information to employees about benefits that may be available to them, such as childcare, nutrition assistance and support for quarantine.

• Allow your workers to engage with community-based service providers per ORS 659A.253.

Employer-provided transportation
The recommendations below are intended to help limit the spread of respiratory illness in employer-provided transportation.
If you use a labor contractor to recruit, solicit, employ, supply, transport or provide lodging of migrant and seasonal farmworkers in connection with employment with your establishment, ensure that these contractors and their agents are also following these steps when they provide transportation from home to the place of employment or in between sites.

- Maintain at least 6 feet of physical distance from other riders and driver, or 3 feet if 6 feet is not possible.
- Limit the number of people per vehicle to maintain the recommended distances.
- Practice and promote good hygiene in vehicles.
  - Provide hand-washing opportunities before entering or use hand sanitizer containing at least 60% alcohol.
  - Cover your coughs and sneezes in the bend of your arm or with a tissue, then throw the tissue away in an enclosed trash basket in the vehicle or once you leave the vehicle.
  - Do not spit.
  - Workers must use a face covering or mask that covers their nose and mouth while sharing a ride.
  - All high-contact surfaces (door handles, seatbelt buckles, armrests, steering wheels, etc.) must be sanitized before each trip, or at least twice each day when in continuous use.

**COVID-19 in the workplace**

If an employee shows illness compatible with COVID-19 symptoms while at work or lives with a household member who is symptomatic, they should not come to work and should be sent home if at work. Be aware that a person who is ill may present some, all or none of these symptoms.

Employers should update employees on sick leave policy both provided and mandated. Encourage employees to be forthcoming about COVID-19 symptoms. Under no circumstances is workplace discrimination or violation of privacy law allowed (see OAR 839, Division 5, Discrimination).

If a worker starts having any illness compatible with symptoms of COVID-19 while on the job:

- Have the employee stop working immediately and isolate from others. Instruct them to wash their hands and wear a mask or face covering.
- Collect information on the employee’s work location, hours and general and specific duties. This information will help guide where to clean and inform coworkers.
- Assist employee in contacting a medical provider and following the direction and guidance of the relevant health department regarding specific quarantine requirements.
- Be transparent with other employees and encourage increased safety and cleaning measures.
- Ensure that sick employees do not share eating areas and bathrooms with healthy workers.
- Clean areas and vehicles where sick employees have been.
• Help workers seek medical care safely. More information on this is available in the next section.

• Establish a process for cleaning and disinfecting after any worker leaves the workplace with a suspected or confirmed case of COVID-19. Suggested steps include:
  ▪ Providing masks and gloves to those performing deep cleaning.
  ▪ Closing off areas used by the person who is sick.
  ▪ Opening outside doors and windows to increase air circulation in the area.
  ▪ Sanitizing all areas used by the person who is sick, including bathrooms, common areas, shared equipment, etc.
  ▪ Wiping all accessible surfaces and common-touch surfaces in the area (door handles, light switches, etc.) with disinfectants registered for use in Oregon. Follow the instructions on the label to ensure safe and effective use of the product.
  ▪ Cleaning up any visible soiling including any smears or streaks.
  ▪ Not allowing others into the area until cleaning is complete.

Support for sick employees

Screening for illness
Ask incoming workers if they have illness compatible with symptoms of COVID-19 at the beginning of their shift and before returning to employer-provided housing. These symptoms include fever or chills, cough, shortness of breath or difficulty breathing, fatigue, muscle or body aches, headache, new loss of taste or smell, sore throat, congestion or runny nose, nausea or vomiting, or diarrhea. If a worker exudes any of these symptoms:
  ▪ House them in a separate area designated for sick people at no cost to the worker (this separation pertains to laundry, cooking and eating areas and bathrooms).
  ▪ Provide a sanitary face mask to the worker and instruct them how to put it on to cover their nose and mouth. See Appendix A for information on cloth face coverings.
  ▪ Assist them in contacting a medical provider.

Medical care
Let sick employees know that seeking care is in their best interest and that the employer is prepared to assist.
  • Call a medical provider in advance so health care workers can take appropriate precautionary measures and arrange for language assistance as necessary.
  • Workers with symptoms of respiratory illness should be encouraged to follow their doctor’s recommendations.
    ▪ If this includes coming into a clinic, use a private vehicle to get to the medical provider and wear a mask or face covering for the entire ride and inside the health facility.
    ▪ If they do not have their own vehicle, facilitate transportation. If assistance is needed, please contact your local public health authority for assistance in facilitating transportation to the provider.
- Circulate air outside by partially opening windows (weather permitting).
- Remember to call 911 right away if emergency services are needed.

**Recovery**

- If the sick person resides in provided housing, ensure food and water are provided as they will not be able to go to the store and may not have any funds to buy their own.
- Public health officials will provide instructions about isolation of the sick person and when they may discontinue isolation.
- Before an employee who has been sick returns to work, verify the following criteria, as discussed in “How to Self-isolate”:
  - They have had no fever for at least 24 hours (without the use of medicine that reduces fevers); AND
  - Other symptoms have improved (for example, when cough or shortness of breath have improved); AND
  - At least ten days have passed since symptoms first appeared.

**Others who may Be exposed**

Because COVID-19 can spread easily from person to person, it is important to identify those who may have been exposed to someone who is showing symptoms of illness.

- Create a plan in case a cluster of workers complain of illness at the same time.
- Identify those who may have been exposed to the individual showing symptoms.
- Help them access testing for COVID-19. Ask your local public health authority for assistance if needed.
- If they reside in employer-provided housing, allow them to be quarantined in separate sleeping areas designated for quarantine until the results of their tests are available.
- If the person showing symptoms is confirmed to have COVID-19, your local public health authority will conduct contact tracing to identify close contacts of the sick person and will provide guidance on quarantine for those exposed.
- Ensure workers comply with quarantine guidance, which can be found [here](#). If you are unsure when a worker may return to the job, ask for clarification from your local public health authority. If workers need financial support while they are not able to work due to quarantine, encourage them to contact the Oregon Worker Relief Fund at 1-888-274-7292.
- Instruct workers and household members who had close contact with a confirmed COVID-19 patient to quarantine and self-monitor for symptoms of COVID-19 as outlined in the “How to Quarantine” document.
- Non-touch thermometers should be used to measure the temperatures of sick workers twice per day (once in the morning and once in the afternoon). Contact your county emergency manager if you are unable to obtain such thermometers.

**Employer-provided housing for domestic and/or H-2A visa workers**

Employers providing housing to domestic workers or H-2A visa holders should follow the same precautions outlined above as required for all workers.
• Continue to follow Oregon OSHA Administrative Rules (which include recently adopted temporary rules specific to COVID-19) found in Division 4 Agriculture, Subdivision J, Work Environment. These rules require sanitary facilities and supplies at the worksite, in common areas, restrooms, sleeping quarters and all common-use cooking and eating areas.

• Ensure bathrooms and hand-washing facilities are consistently stocked with potable water, soap and disposable drying materials for hand-washing. Provide access to tissues, trash bins and plastic bags for the proper disposal of used tissues and other personal care products.

• Post instructional posters and fact sheets in appropriate languages in communal areas and bathrooms to educate employees about proper hand hygiene and symptoms of COVID-19.

• Make sure that workers have access to sanitary facilities and supplies at the worksite, in common areas, restrooms, sleeping quarters and all common-use cooking and eating areas. In addition to hand-washing supplies such as soap and water, provide and encourage the use of hand sanitizer containing at least 60% alcohol, if available.

• Disinfectants active against the emerging viral pathogens and human coronaviruses should be used to sanitize counters, bathrooms, doorknobs, eating surfaces and other high-touch areas. Visit https://www.oregon.gov/ODA/programs/Pesticides/PesticideProductInformation/Pages/COVID-19Disinfectants.aspx for more information.

• Sanitize common-use areas at least twice a day.

• When workers are provided housing in connection with employment, employers are required to provide one set of laundry trays, tubs or machines per 30 occupants (OAR 437, Division 4 Agriculture, Subdivision J, Agricultural Labor Housing and Related Facilities). Examine the capacity of your washing and drying areas for the worker capacity at your site. Consider adding additional wash tubs and washers and dryers as needed to ensure workers can have ready access to clean clothing and clean face coverings.

• Ensure workers comply with quarantine guidance, which can be found here. If you are unsure when a worker may return to the job, ask for clarification from your local public health authority. If workers need financial support while they are not able to work due to quarantine, encourage them to contact the Oregon Worker Relief Fund at 1-888-274-7292.

• When workers are provided housing in connection with employment, ensure you have a plan that includes home isolation and dedicated facilities for sleeping, cooking/eating, showering and toilet areas for those who test positive for COVID-19.

Housing for workers with symptoms of COVID-19

• People with illness compatible with symptoms of COVID-19 must be provided with separate living accommodations at no cost. This includes providing separate sleeping rooms, dedicated laundry, cooking and eating areas, and bathrooms separated from people who are asymptomatic. If assistance is needed to comply, please send an application to the Food Security and Farmworker Safety program: https://www.oregon.gov/oweb/fsfs/Pages/housing.aspx.
- People who are taking care of others with COVID-19 must be provided with respiratory protection, if available. Sanitary face masks, if available, should be worn by sick people when they are outside of their room or when other people are in their room. If appropriate respirators or face masks cannot be obtained, simple cloth face coverings should be used.

- Ventilate the room where persons with COVID-19 are housed on regular intervals.

- Post signs in English and any other languages spoken by the workers encouraging frequent hand-washing and hand sanitizing. Make water, soap, hand sanitizer and cleaning supplies readily available.

- If possible, place housing outside of the Application Exclusion Zone. If housing for sick workers located outside of an Application Exclusion Zone does not exist or separation of sick workers is not possible due to a lack of capacity, work with state and local public health authorities to identify other options.

- You should identify housing within your local areas and have these options identified before you open your labor housing. Communicate promptly if you anticipate needing help to identify this housing. Housing response funds are available to agricultural producers to provide safe housing to farmworkers through the Food Security and Farmworker Safety program: [https://www.oregon.gov/oweb/fsfs/Pages/housing.aspx](https://www.oregon.gov/oweb/fsfs/Pages/housing.aspx).

Appendix B

Practical suggestions for reducing the spread of COVID-19

The following practical suggestions for agricultural workplaces may help reduce the spread of illness at the worksite:

- Pay special attention to areas where workers typically gather, such as the lines for weighing products.
- You may want to increase the number of checkers to move workers through the line more quickly and avoid crowds.
- Make sure that all trays, containers and cartons are cleaned regularly, as these are rotated daily among workers.
- Provide additional hand-washing sinks near the checkers at the end of lines, so workers can wash their hands before going back to the field again.
- Provide a table that can be cleaned outside the door of any toilet or sink facilities, so the workers can put their equipment on the table while using the facilities. Clean these surfaces multiple times each day.
- Display signs in restrooms and near sinks explaining that the workers can tell their supervisors if the water in the reserve for the hand-washing sink is running low. The water does not need to be left running while hand-washing.
- Allow all workers to sanitize their employee identification cards after check-in and throughout the day if they are handled by the checker and the workers.
- Provide alcohol-based wipes to workers while they are handling their cell phones during breaks or lunch.

Document accessibility: For individuals with disabilities or individuals who speak a language other than English, OHA can provide information in alternate formats such as translations, large print, or braille. Contact the Health Information Center at 1-971-673-2411, 711 TTY or COVID19.LanguageAccess@dhsoha.state.or.us.
