

Oregon School Vaccine Requirement Process

Immunizations protect people from vaccine-preventable diseases and help keep communities safe from outbreaks. This is the process for adopting a new vaccine requirement for students in child cares and schools.

This document provides an overview of current immunization requirements in Oregon and authority to require immunizations. The timeline of this process is unknown: **A temporary rulemaking change may take a few days; a permanent change takes months to years.** This document is not intended to reflect any policy choices that might be made by the Executive or Legislative Branch. COVID-19 vaccination requirements for school staff were adopted under separate legal authority from the rules that require children and students to be vaccinated.
